Hassan Allam Holding

Hassan Allam Holding is one of the largest privately owned corporations in Egypt and the MENA region, with over 80 years of experience in the fields of engineering, procurement and construction, building materials, and utilities, led by over 34,000 dynamic and talented employees. Our current construction backlog exceeds EGP 55 billion.

Group Core Activities**1. Engineering and construction**

Our engineering and construction group has over 80 years of experience in Egypt and the wider MENA region. We specialize in delivering engineering, procurement, and construction (EPC) services for large complex projects. As our engineering and construction services are supported by our in-house manufacturing capabilities, we are able to pass on time and cost efficiencies to our clients.

2. Building materials

Our building materials subsidiaries manufacture and supply a wide range of products across Egypt. They help to deliver the infrastructure needed to grow economies and to construct environments that improve the lives of communities. Our key construction components are vertically integrated to maximize control over cost, supply and quality and our operations are geographically diversified to attain maximum reach.

3. Hassan Allam Utilities

Hassan Allam Utilities is the investment and development arm for Hassan Allam Holding operating across four key verticals focused on sustainable infrastructure to address service and availability gaps in water, energy, social infrastructure and transport and logistics in Egypt and MEA.

Water

Addressing severe water scarcity in Egypt and MENA, working across the sector value chain developing and operating different types of assets.

- Desalination
- Wastewater treatment
- Closed community water management solution

Energy

Investing across the energy value chain from generation to distribution and utility management.

- Green energy generation
- Power distribution
- Utilities management

Transport & Logistics

Offering integrated services including deploying state of the art - green buildings with efficient operations and handling.

- Dry Ports
- Airport Logistics Handling
- Concessions
- Value Added Warehousing
- Industrial Parks

Social Infrastructure

Addressing gaps in human capital development and enhancing the development of societies.

- Higher Education
- Healthcare
- Museums & Arts
